

What is business broadband?

Broadband transforms your ordinary phone line into an always on, high-speed voice and data connection. However, residential broadband circuits can often have too many users (as much as a 50:1 contention ratio) and this can dramatically affect the speed and quality of the service you receive.

Our range of business broadband services are specifically designed for business users, with guaranteed low contention ratios of as little as 10:1 and a choice of speeds (up to 16 Meg), ensuring that your business receives the consistent, high quality broadband service that it needs.

There are a variety of competitively priced options available, including:

BUSINESS SDSL

Business SDSL is a premium 'symmetric digital subscriber line' for businesses with high data or bandwidth requirements.

With SDSL you can download and upload at the same speed - that makes SDSL upload speeds up to 4 times faster than other broadband connections.

The following speeds are available:

- SDSL 512k
- SDSL 1 Meg
- SDSL 2 Meg

SDSL is subject to availability on your local exchange. We can check this for you – please just ask.

BUSINESS ADSL

Your "always on" ADSL connection comes with a static IP address as standard and access to unlimited telephone support. A number of enhanced service options are available, with speeds of up to 16 Meg and contention ratios as low as 10:1. Simply call us to discuss the right service level for your business.

Benefits of business broadband

- Fixed-cost Internet access
- Guaranteed low contention ratios
- Speeds of up to 16 Meg
- Fast upload speeds with SDSL
- Guaranteed high quality connections for IP home workers and branch offices.
