

## Line management and rental services

BuyTrade Phones provide a complete range of analogue, ISDN lines and associated network services, via our partnership with Network One. Transferring your lines to BuyTrade Phones can bring immediate benefits, including lower line rental costs, simplified management as well as improving the level of ongoing service and support that your business receives.

### Line audit

Before beginning the process of migrating any customer's existing lines, we carry out a full audit. This helps us to build a clear picture of your line infrastructure and also helps us to identify ways in which you could save money, such as terminating unused services and rationalising your line infrastructure.

### New line installations

As well as providing your existing lines, we can also install new lines for you. We provide:

- **PSTN / analogue** lines
- **ISDN2e** for voice and data
- **ISDN30e** higher capacity ISDN
- **Business Broadband**
- **SIP** IP trunk lines

We also provide a full range of associated network services.

### Support

All line products are backed with a choice of maintenance packages. Simply choose a level of cover that best suits your business. Network One is a WLR3 Provider, which ensures that we can quickly resolve any issues directly with OpenReach.

### Our team

Our network team is made up of dedicated specialists, with many years experience in providing line services to business users.

### The benefits to your business

- Develop a clear and independent picture of your line infrastructure
- Constructive advice from our team of industry specialists
- Lower cost line rental
- Online call usage reports
- A dedicated Account Manager
